SUMMARY

I am a passionate frontend developer focused on learning the latest & best technologies to create sleek, responsive, and user-friendly applications. I am interested in constant self-improvement and expansion of my knowledge. Currently I am open to opportunities within the software development realm, so if you feel like we're a match, I'd love to hear from you!

TECHNICAL SKILLS

Front-end: HTML5, CSS3, JavaScript (ES6), React, SASS, Bootstrap 4, jQuery, Pug
Back-end: NodeJS, Express JS, Firebase, MongoDB, AWS, REST
Tools: Git, Webpack, NPM, Adobe Photoshop, Axure

EDUCATION

- **Cherepovets State University**
  Master's degree in Metallurgical Engineering

- **San Diego Community College**
  Front-End Web Developer Certificate Program, 2018

- **Zero To Mastery Academy**
  Online Coding Academy, 2019

PROJECT EXPERIENCE

1. Contact Form with React, Material UI and AWS.

http://mk-contact-form.s3-website-us-west-1.amazonaws.com

A website contact form with React, Material UI and AWS. The page is a static website, hosted in an S3 bucket. On submit, the UI calls API Gateway to trigger a Lambda function. The Lambda function sends an email using SES, and stores the message in DynamoDB.

2. Github Users App with React, Github API.

https://alexberezkin.github.io/Github_User/

React Github Users app that interacts with the github API to search users and display profile data.

3. Smart-food

https://alexberezkin.github.io/smartfood.github.io/

Food delivery application. This app allows customers to subscribe to one of the delivery plans. Creating this website, I used flexible layouts and CSS queries for making responsive web design, preprocessor SASS and animation effects that make the user experience more convenient and memorable.

4. The Budget App Project

https://alexberezkin.github.io/The-Budget-App-Project/

Budget control app that helps to track incomes and expenses, and calculate the monthly balance. Working on this project I got a better understanding of MVC architecture principles, JavaScript ES6 Syntax, prototypal inheritance, first class functions, closures, etc.

5. Pizza Order Form

https://alexberezkin.github.io/Final_JavaScript/

This is a three steps form that has next and previous buttons. In the first step the user inputs a delivery location, the next step he selects ingredients of pizza and price is calculated automatically, and the last step is payment information. In this project I got experience with JavaScript functions, manipulating with DOM, event handling, Regular Expressions for validation of forms. Used Bootstrap 4 for making responsive web design.

6. Pig game

https://alexberezkin.github.io/Pig-game/

Just a fun Pig game that was built with pure JavaScript. Try to play, it's fun!

7. Sedona website

http://sedona.ml/

One of the first my projects. Responsive website (in the Russian language). Utilized HTML5, CSS3, jQuery.
